1.1 Proxy 3

1.1.1 Commandline manner 3

1.1.2 Configuration file manner 3

2 Problems **5**

2.1 Commit activity not shown 5

Chapter 1

Configuration

In Unix-like system, the configuration file is `~/.gitconfig`.

1.1 Proxy

To set up a proxy, there are two ways:

1. command line
2. configuration file

1.1.1 Commandline manner

```
1  git config --global http.proxy http://127.0.0.1:2334
```

1.1.2 Configuration file manner

Change the configuration file `~/.gitconfig`:

```
[https "https://github.com"]
proxy = https://127.0.0.1:8001
```

Chapter 2

Problems

2.1 Commit activity not shown

The problem is the email configured in my local git is not same as the github account email.

To show the local git email configuration:

```
git config --global --list # global
git config --list # just for one repository
```

To configure the local git email:

```
git config --global user.email <your email> # change the global email
git config user.email <your email> # change one repository email
```
